## Recommendation Letter

Roxana Vasile joined our team March of 2018 and worked with our team on an embedded display software project that utilizes HTML5 technology to provide a single page application on a touch display. Our work will be seen and used in thousands of machines in the coming years, and has been a really rewarding experience, I would like to think, to everyone on our team.

Roxana demonstrated knowledge of modern web technology, as well as being able to adapt and use different types of technology due to the nature of our project.

Roxana has a real passion for software, and many times have stepped up to the plate to solve complicated problems with minimal supervision. The few times I have coached Roxana through new concepts they were absorbed and retained with relative ease. In addition to that she melded well within the team, and helped fill knowledge gaps where needed.

Roxana has been a great help of alleviating some of my workload so we could better meet steep deadlines and deliver large amounts of content. The amount of content we managed to complete as a team this last month dwarfs all previous releases we have done for the last two years, and without Roxana's support that simply would not have been possible.

With Roxana's rate of growth in her short time here I would think that she would fit in well in just about any type of development environment due to her determination and interest in this type of work. She has been instrumental to our project and has contributed at a higher level of competence than I would have expected.

I recommend Roxana for any type of development position due to her current knowledge of software development, her ability to learn quickly and apply what she has learned to produce software that works great and delivers the complex functionality to meet real world requirements.
